

CONTROL THE CHAOS

With the world's first service-centric AIOps platform for the hybrid enterprise.

Now you can harness the power of artificial intelligence to simplify the chaos of IT operations management and your overall system health. OpsRamp is the first SaaS platform that drives total visibility across hybrid infrastructures, offers complete multi-cloud infrastructure monitoring and management for business-critical services, and optimizes services through automation and [integration](#) with ITSM and DevOps tools.

STOP MANAGING INFRASTRUCTURE. START DELIVERING VALUE.

IT operations management teams can shift to the center of any enterprise digital transformation initiative by ensuring excellent digital customer experiences, and that starts with modern, reliable IT services. The OpsRamp platform offers real value for IT operations teams bogged down with too many tools, shadow IT and escalating cost pressures, with:

Visibility across your hybrid IT infrastructure

Reduction in mean time to detect and resolve (MTTD and MTTR)

savings annually over the cost of maintaining siloed point tools

With OpsRamp, IT operations teams can:

Be the First to Know

OpsRamp auto-discovers multi-cloud and on-premises infrastructure across your IT environment and maps it to your IT services.

Take Action Faster with Context

OpsQ, our AIOps event management engine, drives faster incident resolution and reduces MTTD/MTTR of business-critical services.

Deliver IT Operations as a Service

Automate workloads, manage multi-cloud costs and see your IT operations become more efficient over time. All from one platform. All across the enterprise.

A SOLUTION FOR EVERY PROBLEM

Simply choose the path that's right for you:

Unified Service Discovery: View and analyze your hybrid IT infrastructure stack with automated IT asset discovery and onboarding policies. Gain complete flexibility over where to host your workloads by understanding how your assets are shifting with business demands.

Unified Service Intelligence: Dynamic discovery, unified monitoring, service mapping, intelligent event correlation, and smart notifications combine to give you one central place to understand the health of your business services.

Modern Infrastructure Monitoring: End-to-end visibility across applications, datacenters, public clouds, point tools, and anything else you've got under the hood.

Intelligent Incident Management: Drive better problem identification, impact analysis, and first response for incidents with a streamlined process for proactive resolution and automated remediation that natively integrates with your ITSM tools.

Service-Centric AIOps: Clinically examine your incidents, establish a tight feedback loop between your different teams, and deliver quick resolution using OpsQ, our artificial intelligence-powered event management engine.

ALL INTEGRATIONS WELCOME

Don't give up the tools you love. Whether it's Atlassian, ServiceNow, New Relic or Puppet, the OpsRamp platform can consolidate them all into one, contextual view of the metrics that matter.
